

Paid Search

Paying search engines to get traffic

Simple Methods Available

There are two, “off-the-shelf” methods that you can use almost immediately to check progress

HubSpot website grader:

Can evaluate any website you enter into their query
Assess the health of website architecture

Google Analytics:

Need to have administrative access to the website as webmaster
Obtain insights from website traffic

Today's Agenda

01

Google Analytics

An exploration of
Google's powerful tool

02

Paid Search

How does pay-per-click
(PPC) work?

Google Merchandise Store

The store's website: <https://shop.googlemerchandisestore.com/>

This is a real store for selling products related to Google:

We are using the store as an example for Google Analytics.

Google Analytics in Action

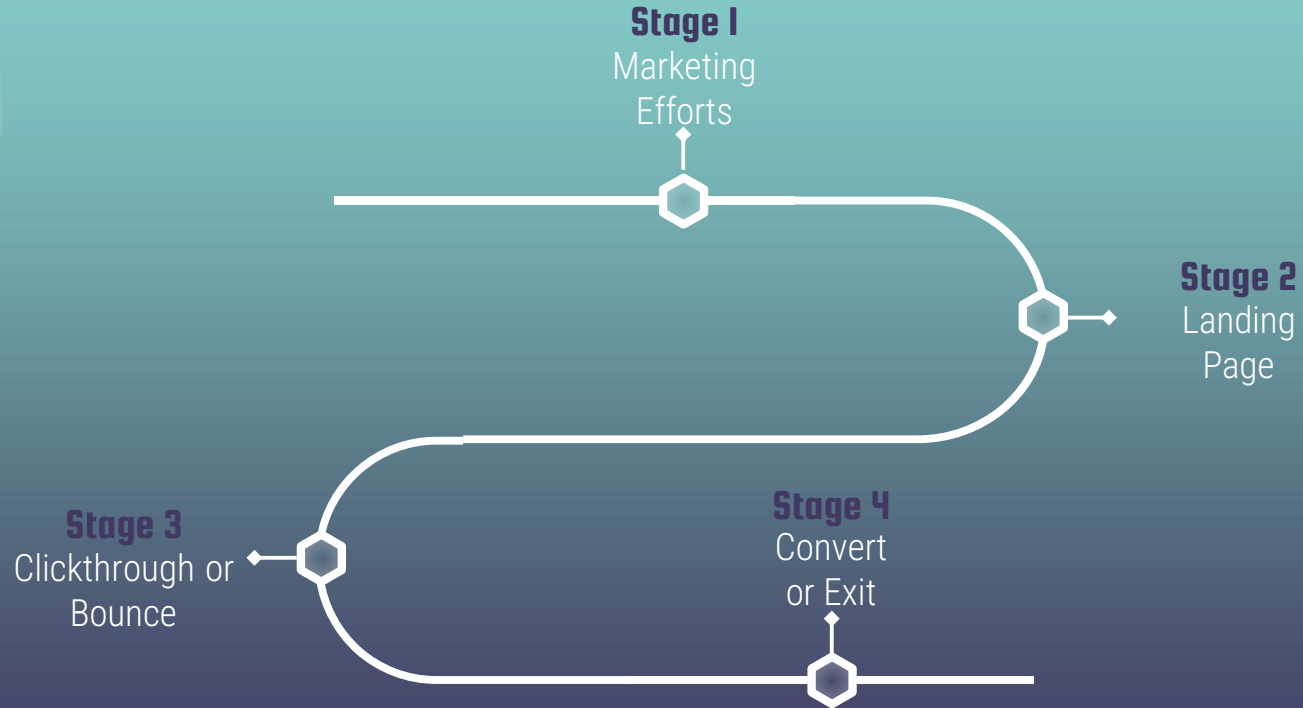

Go to <https://support.google.com/analytics/answer/6367342?hl=en>

Sign Up for a GA account & Add Demo

The screenshot displays the Google Analytics interface. At the top, the 'Analytics' logo is on the left, followed by the account path 'All accounts > UA - Google Merchandi...' and '1 Master View'. A search bar contains the text 'Try searching "Week over Week Growth of Session...'. A yellow 'Success.' notification box is visible. The left sidebar shows navigation options: Home, Customization, and a 'REPORTS' section with Realtime and Audience (selected). The main content area is titled 'Audience Overview' with a green checkmark. It features a card for 'All Users' showing '100.00% Users' and a '+ Add Segment' button. Below this is an 'Overview' section with a dropdown menu set to 'Users' and a 'VS.' comparison tool with a 'Select a metric' prompt.

Purchase Funnel

Upon Entry

Source/Medium

Organic search (www.google.com)

Display advertising/search advertising

Referral: the URL that originally generated the request for the current visit

A social media URL (www.facebook.com)

An email server (www.gmail.com)

A website URL (e.g., affiliate marketing)

Direct (not a referral): the URL of the website (www.hku.hk)

Landing page

The page that identifies the beginning of a visit

During a Visit

Impressions: number of times a content was seen

Clickthrough: the number of times a link was clicked by a visitor.

Clickthrough rate (CTR): the number of times a link was clicked divided by impressions.

During a Visit

What is CTR?

2%

The image shows a woman with long brown hair speaking in front of a chalkboard. On the left side of the chalkboard, the text "What is CTR?" is written in large, bold, white letters with a black outline. Below this text is a graphic of a laptop screen displaying "2%". In the top right corner of the chalkboard, there is a logo for "The Hub" with a stylized 'H' and the text "The Hub". In the bottom right corner, there is a graphic of a blue and green arrow pointing upwards.

During a Visit

Sessions – the total number of times users visit the website.

A session is a group of user interactions with your website that take place within a given time frame. E.g., a single session can contain multiple page views, events, social interactions, and ecommerce transactions.

A session can include multiple Pageviews (PV).

Exit

Bounces (or single page view visits) – visits consisting of a single page view.

Bounce rate– percentage of visits consisting of a single page view.

Conversion – Complete a purchase or generate a lead

Conversion rate (CR) – the number of conversions divided by the number of visitors.

ABC's of Google Analytics

A is for Acquisition: What brought visitors to your site?
How do visitors find your website?

B is for Behavior: What did the visitors do once they got there?
Behavior not only includes what pages they visited, but specifics of how they interacted with your pages and site

C is for Conversion: Did they do what you wanted them to do?
Here is where you can see all your goal conversions, like downloading material, form submissions, add-to-carts, completed checkouts, etc.

Exercise

Explore the Google Analytics for the Google Merchandise Store

See what you can learn from the Google analytics and share your findings with us!

Examples: **What drives people to the store? The performance across different devices? The performance across different user groups?**

The background is a teal-to-blue gradient with a white hexagonal grid pattern. The grid consists of interconnected hexagons, some of which are filled with a lighter shade of teal, creating a layered, geometric effect.

Online Advertising

The Growth of Online Ad

Total Media Ad Spending in the US, Traditional vs. Digital, 2018-2023

billions

Note: *includes directories, magazines, newspapers, out-of-home, radio and TV; **includes advertising that appears on desktop and laptop computers as well as mobile phones, tablets and other internet-connected devices, and includes all the various formats of advertising on those platforms; includes SMS, MMS and P2P messaging-based advertising

Source: eMarketer, February 2019

Paid Search is about 40% of Online AD

	2019	2020	2021	2022	2023
Display	\$70.06	\$81.38	\$92.53	\$100.71	\$107.91

Paid search

Organic search

Organic Search (SEO)

Less direct control over ranking

Limited control over message

- Message is typically generic / brand driven
- Pulled from code on website

When done well, it can be a very effective method of increasing traffic and leads

High organic rankings have a positive effect on the brand (and vice-versa) 69% of total search clicks are organic

Can be expensive (if outsourced) & time consuming; Not quick process and/or results

Paid Search (PPC)

Can directly influence ranking (based on bid)

Control over message

- Can be more product focused / benefit driven, frequent update

Compensates for inconsistencies in SEO, ensuring consistent placement

High paid rankings have a positive effect on the brand (and vice-versa)

Budgeting opportunity
Immediate results

Example Advertiser

The image shows the homepage of David's Cookies. At the top is a dark red navigation bar with the David's Cookies logo on the left, and three menu items: 'SHOP PRODUCTS', 'GIFT OCCASIONS', and 'CORPORATE GIFTS'. A search bar is located on the right side of the navigation bar.

The main banner features a large image of two chocolate chip cookies. On the left side of the banner, the text reads: 'SAVE UP TO 40% ON SELECT ITEMS.' The right side of the banner contains the text: 'END OF SEASON SALE' followed by a decorative wavy line and 'SHOP NOW' in large, bold, white letters.

Below the banner is a grid of eight product category tiles, each with an image, a title, and a short description:

- Holiday Gifts**: A sure delight for anyone. Image shows a basket of cookies with a teddy bear.
- Items on Sale!**: Shop our holiday sale items. Image shows a red container of cookies.
- Fresh Baked Cookies**: Baked the Day Your Order Ships. Image shows a red container of cookies.
- Brownies & Crumbcakes**: Delicious & Fresh. Image shows brownies and crumbcakes.
- Cookie Dough**: Image shows a tray of cookie dough.
- Cookie Bars**: Image shows a tray of cookie bars.
- Cookie Mixes**: Image shows a tray of cookie mixes.
- Cookie Toppings**: Image shows a tray of cookie toppings.

How did we end up in position #1?

How much did we pay for this?

Are we paying more than the ad in slot #2?

Paid search ads are sold by auction

Google runs an auction for every search on real time.

Advertisers only pay when a user clicks (not for display ads!)
Paid search auctions are based on a “**Generalized Second Price**”
auction.

Because you pay the next highest, or the second highest bid - get it?

Second-Price Auction

Suppose that we have three bidders for the keyword “office gift basket”, A, B and C.

A bids \$4, B bids \$5, C bids \$3.

B wins the auction because her bid is the highest ($\$5 > \4 and $\$3$).

However, B only pays Google \$4 (the second highest bid, \$5 is the first highest, \$4 is the second highest, \$3 is the third highest bid).

Why not First-Price Auctions?

In first prize auction, people pay the prize they bid.

Advertiser	Bid	Position	CPC
D	\$1.00	1	\$1.00
B	\$0.75	2	\$0.75
A	\$0.50	3	\$0.50
C	\$0.40	4	\$0.40

Why not First-Price Auctions?

In first price auction, people pay the price they bid.

Advertiser	Bid	Position	CPC
D	\$1.00	1	\$1.00
B	\$0.75	2	\$0.75
A	\$0.50	3	\$0.50
C	\$0.40	4	\$0.40

In this example, D wins the bid and pays \$1 (CPC means “cost per click”).
Advertiser games the system.

Will D have incentives to decrease bid? How about bidding \$0.76?

Second Price Auction

Winner pays $CPC = \text{next highest bid}$

Advertiser	Bid	Position	CPC
D	\$1.00	1	\$0.75
B	\$0.75	2	\$0.50
A	\$0.50	3	\$0.40
C	\$0.40	4	\$0

In this example, D already pays \$0.75, and she has no incentive to decrease her bid. If she decreases the bid to any number greater than \$0.75, she still pays \$0.75. If she bids < 0.75 , she will lose the auction.

Second Price Auction

The designer of second-price auction, William Vickrey, won the Nobel Prize in Economics in 1996.

Let's guess

What is the most expensive keyword in Google's search advertising?

Let's guess

What is the most expensive keyword in Google's search advertising?

It is *insurance*.

Let's guess

What is the most expensive keyword in Google's search advertising?

It is insurance.

How much do you need to pay Google to get a click on "insurance"?

Let's guess

What is the most expensive keyword in Google's search advertising?

It is *insurance*.

How much do you need to pay Google to get a click on "insurance"?

It is *\$54.91*.

Quality Matters!

Quality score affects eligibility to compete in auction, likelihood of winning auction, and the actual amount paid per click. Three main dimensions to improve Quality Score:

Click-through rate

- Identify keywords with low Quality Score, and may be worthwhile pausing or deleting them
- Low scores bring down the overall ad group quality

Ad Relevancy

- Make keyword matches more restrictive
- Build negative keyword list to filter irrelevant search queries

Landing page

- Why does Google care about the landing page quality?

Quality Matters!

Keyword: **internet provider**

Showing ads right now?

Yes

Quality score [Learn more](#)

10/10

Expected clickthrough rate: **Average**

Ad relevance: **Average**

Landing page experience: **Average**

[Ad Preview and Diagnosis](#)

Generalized second-price auction with quality score

Currently used by Google and Bing

Position determined by **ad rank** = bids × quality score

CPC = the next guy's ad rank / own quality score + a bid increment

Advertiser	Bid	Quality Score	Ad Rank	Position	Actual CPC
A	\$0.50	10	5.0	1	$4.5/10 + .01 = \$0.46$
B	\$0.75	6	4.5	2	$3.2/6 + .01 = \$0.54$
C	\$0.40	8	3.2	3	$2.0/8 + .01 = \$0.26$
D	\$1.00	2	2.0	4	$0/2 + .01 = \$0.01$

Why Auctions?

Why a “generalized second price (GSP) auction weighted by quality”?

Auctions are efficient in that they extract more revenue from higher value words

They allow price discrimination without the auctioneer (Google) needing to determine willingness to pay

Auctions are scalable, across words and time

If a word suddenly becomes valuable, the auction can pick that up

Exercise

Example: You won the AdWords auction. Your keyword (e.g., organic pet food) has a max CPC bid of \$0.75 and a Quality Score of 9. The advertiser in second place has an Ad Rank of 6.3. Suppose an expert has offered to improve your website so that your Quality Score goes up to 10. Suppose the number of clicks will be 1,000. How much are you willing to pay the expert?

Exercise

Example: You won the AdWords auction. Your keyword (e.g., organic pet food) has a max CPC bid of \$0.75 and a Quality Score of 9. The advertiser in second place has an Ad Rank of 6.3. Suppose an expert has offered to improve your website so that your Quality Score goes up to 10. Suppose the number of clicks will be 1,000. How much are you willing to pay the expert?

Initial CPC: $6.3/9 + 0.01 = 0.71$

Improved CPC: $6.3/10 + 0.01 = 0.64$

So, you save $0.71 - 0.64 = 0.07$ on each click. Because you have 1,000 clicks, you will save \$70. Therefore, you are willing to pay the expert up to \$70.

Summary

Search engine runs an auction for every search.

Advertisers only pay when a user clicks (pay-per-click).

Paid search auctions are based on a “Generalized Second-Price” auction, because you pay the next highest bid

Many refinements such as “quality score”.

The background is a teal-to-blue gradient with a white hexagonal grid pattern. The grid consists of interconnected hexagons, some of which are filled with a lighter shade of teal, creating a layered, geometric effect.

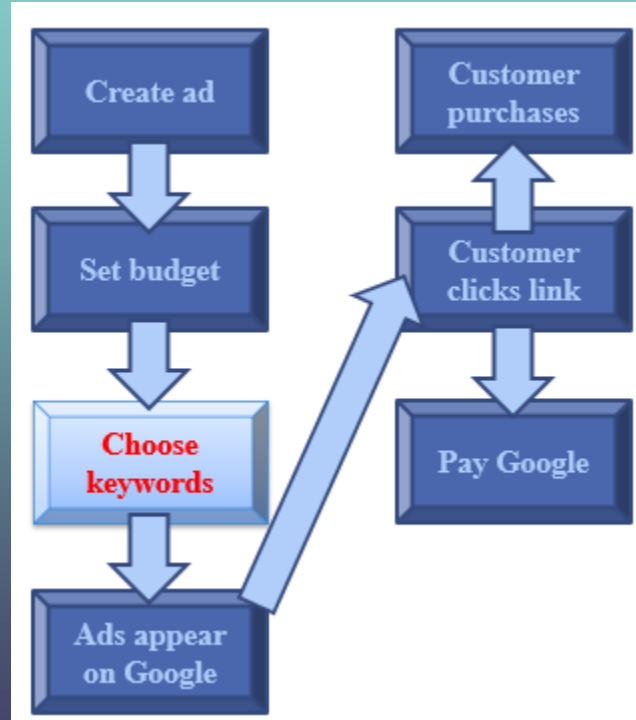

Keywords

Basics of paid search

Choose campaign, ad groups, and ads/keywords

Your ad will appear when those keywords are searched.

Avoid duplicate (and non-duplicate competing) keywords across different campaigns and ad groups.

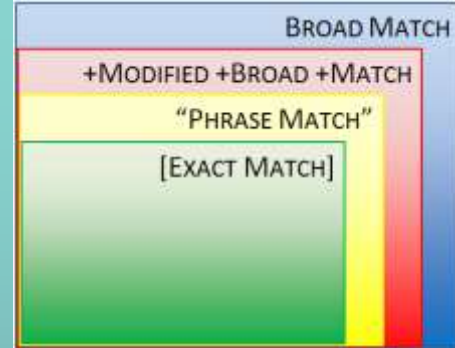

Long Tail of Keywords

Most Search Queries Are Unique: you have to bid on lots of keywords

Five Types of Keyword Matches

Match type	Special symbol	Example keyword	Ads may show on searches that	Example searches
Broad match	none	women's hats	include misspellings, synonyms, related searches, and other relevant variations	<i>buy ladies hats</i>
Broad match modifier	+keyword	+women's +hats	contain the modified term (or close variations, but not synonyms), in any order	<i>hats for women</i>
Phrase match	"keyword"	"women's hats"	are a phrase, and close variations of that phrase	<i>buy women's hats</i>
Exact match	[keyword]	[women's hats]	are an exact term and close variations of that exact term	<i>women's hats</i>
Negative match	-keyword	-women	are searches without the term	<i>baseball hats</i>

Broad Match

Default match type.

Display ads if searcher's query matches the keyword exactly, on variations like singular and plural, stemming, misspellings, as well as related words.

For example, custom made shoes can trigger ads on search queries like:

custom made shoes

shoes custom-made

castom made shoes

Broad Match Modifier

Restricts Google's expanded match capabilities

Select some or all of the words in the keyword you'd like to restrict by adding a plus symbol (+) before each selected word

For example, the keyword +University +Hong Kong +jobs can trigger ads on search queries like:

University of Hong Kong jobs

University of HK job

Hong Kong University jobs

HKU jobs

Phrase Match

Can apply to single-word or multi-word keyword by enclosing it in quotes
For example, keyword “silk curtain” could trigger ads on search queries like:

silk curtain

silk curtains

silky curtain

want to buy silk curtains

buy silky curtains for stage

But, keyword “silk curtain” would not trigger ads on search queries like:

silk for curtain

curtain silk

silk kitchen curtain

silk shade

Exact Match

Most restrictive option

Can be applied to single word or phrase by enclosing it in square brackets
For example, keyword [broadway plays] can trigger ads on search queries like:

- broadway play
- braodway play
- braodway plays

But keyword [broadway plays] would not trigger ads on search queries like:

- broadway plays today
- nyc plays
- play broadway

Negative Keywords

A negative keyword is a single word or a phrase prefaced by a single minus symbol.

For example, there are two places called Washington: Washington DC and the Washington State. You can use – DC to filter queries on Washington DC.

Timing: using Ad Schedule & Bid Adjustment

Example

You run a dog-sled touring business in Alaska, and you have an existing ad group max CPC bid of \$1.00. You've scheduled your ad to show on Tuesdays between 8 and 11 a.m. You decide to set a bid adjustment of +10% on Tuesdays between 8 and 10 a.m. So, your maximum bid for that time period would be $\$1.00 \times (+10\%) = \1.10 .

Because many of the customers that love your dog-sled tours live in Anchorage, you decide to set an additional +20% adjustment for Anchorage. Your maximum resulting bid for a search that occurs on Tuesdays at 9:30 a.m. for a customer in Anchorage will be \$1.32. Here's how it works:

Starting bid: \$1.00

Tuesdays, 8 to 10 a.m. adjustment: $\$1.00 \times (+10\%) = \1.10

Anchorage adjustment: $\$1.10 \times (+20\%) = \1.32

Maximum bid for Tuesdays, 8 to 10 a.m., in Anchorage: \$1.32

Takeaways

Understand the **buying process** of paid search ads

Different types of **keyword match**

Broad, broad modifier, phrase, exact, negative

Keyword tools are commonly used to gain competitive insights

Measurability

“I know half my advertising is wasted,
I just don't know which half”
--- John Wanamaker

How do we measure the effectiveness of online ads?

How do we measure the effects of online ads?

Impressions

Frequency & Reach

Clicks

Click-through rate

Ad Engagement

Mouse-over, Interaction

FB: Like, Share

Twitter: RT, Favorite

Conversions

Sign-ups, Downloads, Place in cart, Purchase

Impression

Impression: A user loads 1 ad on a website

Frequency: Number of ads per person

Reach: Number of people who see at least one ad

Clicks

Instantaneous feedback on individual ads – revolutionary!

Clicks can be used as a measure of intent to buy.

Click-Through Rate (CTR) = the number of times a link was clicked divided by the number of times it was seen. $CTR = \text{Clicks} / \text{Impressions}$

Correlation between CTR & ad effectiveness (AdFX) is debatable

E.g. Does a higher CTR on mobile mean higher mobile AdFX?

Ads are smaller, but fill more of the screen

Up to 50% of clicks on mobile banner ads are accidental (GoldSpot Media)

Clicks

Click-Through Rate in Google Shopping and Google Paid Search
By Device 2017-2018

Source - Sidecar-2019 Benchmarks Report: Google Ads in Retail

**Sometimes clicks are unreliable...Firms might even engage
in click fraud**

Engagement

Engagement: A catch-all for user interactions with the ad beyond clicking including mouse-over, interacting with interactive ads, rollover, start or skip video

Social engagement/conversion include

FB: Like, Share

Twitter: RT, Favorite

Intentional measure showing whether consumer likes ad more than just clicks

Engagement

Conversions

Conversions: A catch-all for user interactions with advertiser including sign-ups (newsletter, membership, etc.), downloads, shopping on-site, placing items in cart, purchasing.

Conversion Rate (CR) = the number of conversions divided by the number of times the ad was clicked. *CR=Conversions/Clicks*

Probability of Purchase = CTR x CR, here purchase is broadly defined.

Conversions: Pros and Cons

(+) Some direct response advertisers only need conversion info (like app makers & downloads)

(+) For brand advertisers (like Coca-Cola), conversions (& engagement) are often all they can measure!

(-) Conversion rates are typically very low
Decisions require much more impression data

Conversions

Goals

Overview

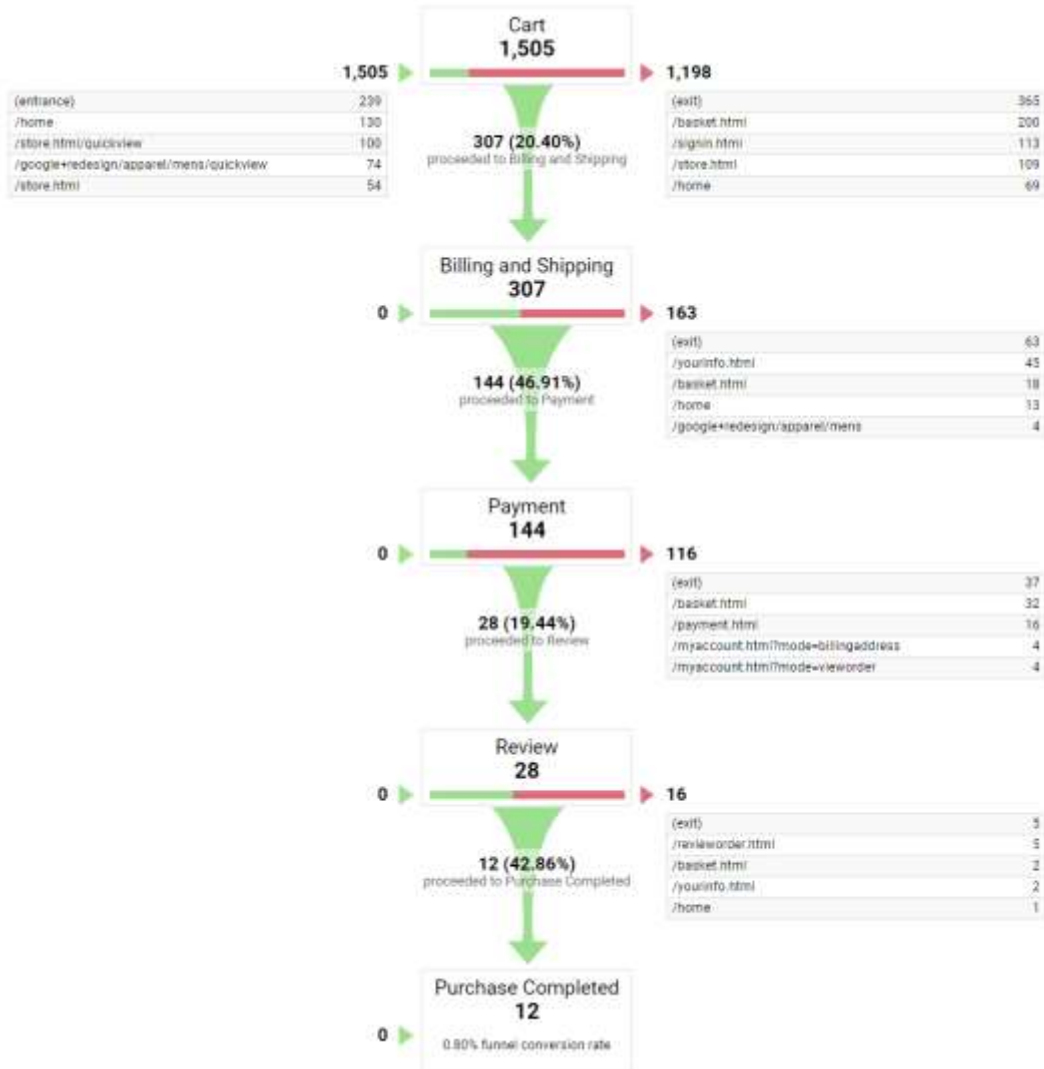

Goal URLs

Reverse Goal Path

Funnel Visualization

Goal Flow

Smart Goals

Some Metrics

Impression = number of instances ad is seen by user

Cost-per-Click (CPC) = cost paid to search engines

Click-Through Rate (CTR) = efficiency of generating clicks from delivered impression

Conversion Rate (CR) = efficiency of generating sales from click

Probability of Purchase = $CTR \times CR$

Revenue = Prob. of purchase \times Profit margin per purchase \times Impressions

Cost = $\# \text{Clicks} \times \text{CPC}$, where $\# \text{Clicks} = \text{Impression} \times \text{CTR}$

Net Revenue = Revenue – Cost

Return on Investment (ROI) = Net Revenue / Cost

Reminder

In next lecture we will be working on the data project.

Please bring your laptop with you (with R/Tableau installed).
